

HAHM: Home Assistant Health Monitor

Progress Update

Jagath Jai Kumar

Problem

- ▶ **Tracking mood and symptoms** is a critical part of managing anxiety, stress, depression, and mental health issues
- ▶ Home assistants provide a **hands-free** way for users to **record moods** and symptoms in a ubiquitous way

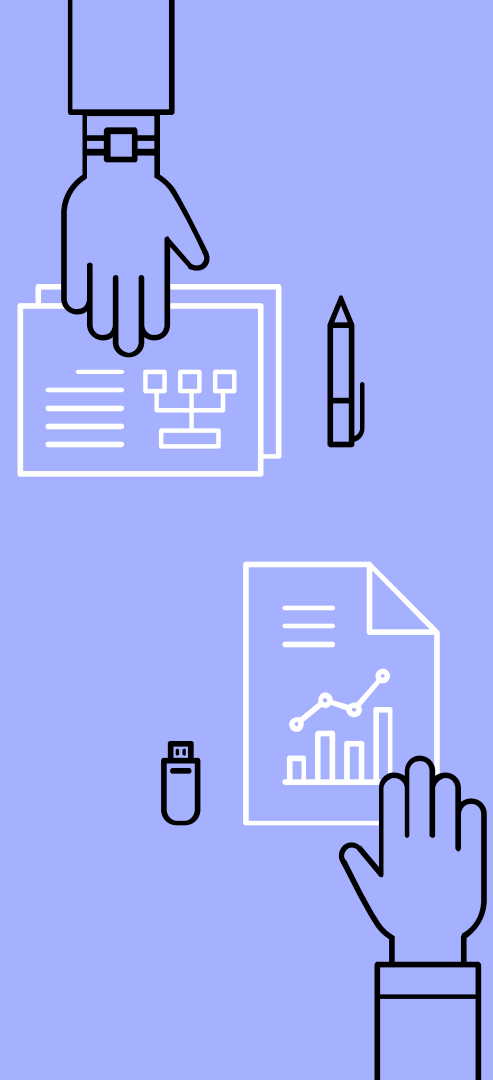

Status

- ▶ I have built the Amazon Lambda infrastructure for dialog and saving mood results to a DynamoDB instance
- ▶ I have deployed a version for test purposes using Serverless deploy

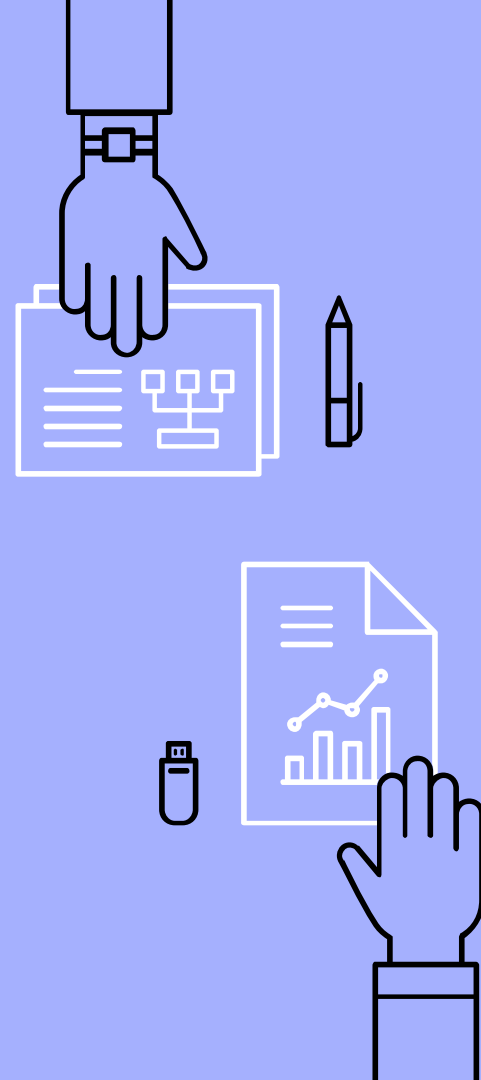

Problems

- ▶ Specific Dialogue interaction - here is where I need some help
- ▶ What questions do I ask? What responses can I expect to receive?

Next Steps

- ▶ Connect DynamoDB to Web app and Mobile app front ends
- ▶ Display user results in a dashboard-style application

Recap

- ▶ Mood tracking Alexa V1 complete
- ▶ Need to enhance with better dialogue interaction
- ▶ Meantime: build web and mobile user front ends
